Kotlin 101

Languages

Turkish (Native)
English (Professional working proficiency B1)

About Me

I am 26 years old and I live in Istanbul. I have been interested in electronics since childhood. This curiosity led me to make robots and to learn how to program them. That journey continued with a fast and comprehensive entry to the software world. I have focused rowing and enhancing my skillset consists of all these areas. I believe that the learning process is an ongoing lifestyle. Through all the education and experience I had in my career; As the intersection point of my childhood dreams and my professional career, led me to commit to work on Software Engineering. My main goal in this field is being productive to solve real life problems by having a pragmatic mindset. Currently, I am advancing my career in web programming and mobile programming. I am currently doing Micro Master on Mobile Applications at HarvardX.
